

Since 1929

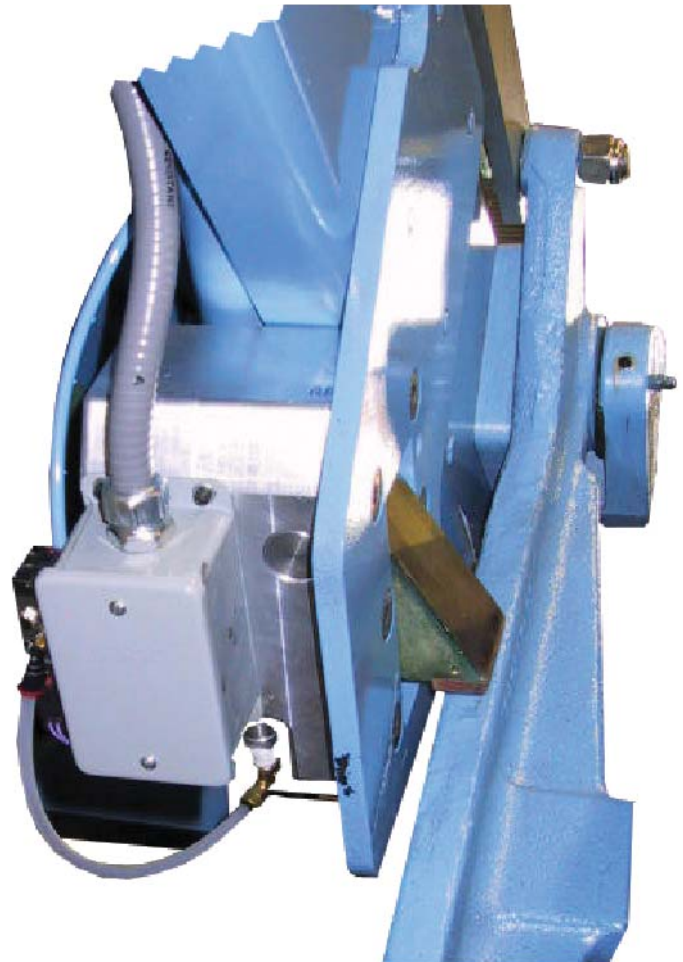

# Deck Lock-Out™ System (DL-O)

(patented)

Allows Stacking Deck to be fully raised, then set into a Zero Energy State (ZES), for safe cleanup under the stacking deck while the machine is stopped. All locking devices and controls are internal to the stacker and do not interfere with other operating components or obstruct operator access.

## **Benefits:**

- Places stacker deck in a raised, safe condition for easy access under the deck for cleanup
- System components are internal to stacker and do not obstruct operator access or other components
- System controls are at operator's main panel, with easy visual confirmation from outside the stacker.

**DL-O in Locked Position**
